

Laddermatic™

Laddermatic™ Telescopic Ladder

The Laddermatic™ Telescopic Ladder is the ultimate in usability - a ladder you can easily transport and store, and one which is strong and robust enough for professional and trade use. Manufactured from strong, lightweight aluminium this ladder fully complies with EN131 and its safety features ensure maximum protection for users.

Simple and easy to use - the ladder is extended one rung at a time, from the base upwards, with the locking mechanism on each rung clicking into place. To close the ladder the triggers are squeezed together and the Laddermatic™ retracts easily and smoothly with no risk of trapped fingers due to its unique safety features. The ladder can be extended to any length up to its maximum size and with a 12' maximum length this ladder can be used to reach the highest of ceilings.

Key advantages of this ladder are...

- Slimline profile - no more depth than a single conventional ladder section.
- Can be stored in the smallest of spaces - in the car boot, under the bed, in a cupboard
- A unique stile locking system with no exposed mechanism provides maximum safety
- Welded rungs for maximum strength and durability
- Non-stick coating on moving parts for ultra-smooth operation
- Extra large anti-slip feet for added protection in use
- Easily dismantled for cleaning and maintenance
- Sections are easily replaceable
- Fully guaranteed for 12 months from date of purchase
- Guaranteed to withstand a vertical load of 150kg in the normal working position
- Environmentally friendly - all the components of the Laddermatic™ are fully recyclable

Laddermatic Telescopic Ladder			
Code	Closed Height	Extended Height	Weight (kg)
LAD12	0.99m (3'2")	3.66m (12'0")	11.8
LADE	0.61m (2'0")	Extension Section	3.0
